

PRODUCT HANDBOOK

AxEin Billing (Promedix)

Billing + Inventory + GST Reports + Accounting (Vendor & Customer Debts)

Who This Is For

Admins, billing operators, inventory managers, and accountants/CA reviewers.

- Daily billing & invoice printing
- Inventory tracking (batches, expiry, low-stock)
- GST input/output computation & export
- Vendor payables + customer receivables

Document Info

VERSION	1.0
DATE	2026-02-07
SCOPE	Next.js app in <code>/Users/nadiya/AxEin/app</code>

Screens and exact labels may differ slightly by deployment. Core workflows and data fields are stable.

QUICK BILLING

Full / Partial / Pending Payments

HEALTHCARE FIELDS

Patient / Doctor / DC No

EXPORTS

CSV/Excel + Print Views

Getting Started

Access

Open the app URL (for local dev:
`http://localhost:3000`).

- If the app is license-gated, activate it via the Activation flow.
- Use the top-right actions to switch theme and review alerts.

Recommended First Setup

- Settings: fill Business Profile (name, GSTIN, address, phone).
- Settings: add Company Bank Details (shown on invoices).
- Settings: set invoice defaults (notes/terms) if needed.
- Products: create categories and products, then start billing.

Navigation & UI

App Layout

- **Header:** primary navigation (Dashboard, Inventory, Invoices, Reports, Accounting, Settings).
- **Sidebar:** quick module shortcuts (collapsible on desktop, drawer on mobile).
- **Alerts bell:** low-stock, expiry, and vendor debt reminders.
- **Theme toggle:** light/dark mode.

Tip: The UI is optimized for keyboard + mouse. Use table actions (Edit/Save/Export) for fast operations.

Quick Billing

Purpose

Create an invoice fast: search products, add quantities, capture payment, and generate an invoice instantly.

Key Features

- Customer selection (optional): select existing customer or type a new name.
- Healthcare fields: Patient Name, Doctor Name.
- Item fields: Category, HSN, Lot/Batch No, Expiry Date (if available).
- Payment modes: **Paid, Partial, Pending**.
- Auto-generated DC No format: `DC/<CompanyName>/<YYYYMMDD>/<HHmm>--<Number>`.

Workflow

1. Open `Quick Billing`.
2. Select customer (or leave blank for walk-in).
3. Search products, click a suggestion to add as a line.
4. Update Qty/Discount if needed, add Lot/Expiry if applicable.
5. Choose payment mode (Paid/Partial/Pending) and method (cash/upi/card/bank).
6. Click **Save & View Invoice**.

Invoices

Invoice List

- Search by invoice number or customer name.
- Sort and filter by date range.
- Export list as CSV.
- Payment badge tags: **Paid, Partial, Pending**.

Invoice Details

- Shows patient/doctor/DC No (if set).
- Shows item metadata: Category, HSN, Lot, Expiry.
- Shows Amount Paid and Pending Amount.
- Print/PDF button generates a shareable PDF.

Products & Categories

Products

- Core fields: Name, Selling Price, GST slab, Stock Qty, Low Stock Threshold.
- Healthcare fields: Category, HSN Code, Lot/Batch No, Expiry Date (optional).
- Import products via CSV (Products Import) where supported.

Best practice: maintain Categories properly so Quick Billing and reporting remain consistent.

Quotations

- Create quotes for customers before converting to invoices.
- Supports additional fields like Lot and Expiry (if available) and product tax details.
- Convert quotation to invoice when ready.

Inventory

Low Stock

Highlights items at or under threshold. Update values and save where supported.

Expiry

Shows near-expiry and expired products/batches (based on configured near-expiry days).

Stock Adjustments

- Create draft adjustments and post them to apply stock changes.
- Use reasons such as damage/loss/correction.

Purchases

New Purchase

- Add vendor bill details and item lines.
- Optionally add quantities to inventory immediately.
- Supports importing lines via CSV in the items grid.
- Payment tracking: paid amount and pending amount.

Purchases drive Vendor Debt in Accounting when they have pending amounts.

Reports

- KPIs: Revenue, fast/slow movers, low-stock trends.
- Dead stock list with pagination.
- Tax/GST computation chart and links to print/export.

GST (Tax) Report

What It Means

- **Output GST:** GST collected on invoices (sales).
- **Input GST:** GST paid on purchases (eligible ITC).
- **Net GST:** Output – Input (Payable if positive, Credit if negative).

Controls

- Monthly / Quarterly grouping
- Toggle to include/exclude draft purchases
- Export to CSV/Excel for CA submission
- Print view formatted for A4

Accounting (Debts)

Vendor Debt (Purchases)

Shows payables: vendor bills with pending amounts.

- Outstanding total per vendor
- Last transaction date
- Aging buckets (0–30 / 31–60 / 60+)

Customer Debt (Invoices)

Shows receivables: customers with pending invoice balances.

- Outstanding total per customer
- Recent unpaid invoices
- Aging buckets for receivables

Alerts Bell includes vendor debt reminders so billing/admin teams can follow up quickly.

Settings (Admin)

Business Profile

- Company name, address, GSTIN, phone, state code.
- Logo (best for invoice): a wide logo around **600×200** PNG/JPG/WebP.

Bank Details

- Account name, account number, IFSC, bank name, branch, UPI (optional).
- Printed in invoice footer.

Invoice Defaults

- Default Notes / Terms appear in Quick Billing (editable per invoice).

Backup & Restore

- Backup is generated as a **ZIP** archive from Settings.
- Restore re-imports data for disaster recovery.
- Recommended schedule: daily or weekly backups depending on transaction volume.

Restore overwrites data. Always keep a safe copy of the current backup before restoring.

Printing & PDFs

Invoices / Quotations

- Use Invoice page **Print/PDF** to generate a shareable PDF.
- Print layouts are designed for A4 and include healthcare fields.

GST Summary

- Print view is optimized for CA submission and includes period and grouping.

Windows Installer

The project includes a Windows installer script to simplify deployment on Windows 10/11.

SCRIPT `app/script-tools/axein-installer.ps1`

DOES Installs dependencies, configures services, starts containers, and helps initialize the app.

If your environment requires a fully offline installer bundle, treat the PowerShell script as the starting point and add offline package sources.

Troubleshooting

Common Fixes

- **Changes not showing:** rebuild the web container using the local override compose file.
- **Blank print:** ensure the printed content is within `.print-area` (handled for major print views).
- **DB migrations:** apply the latest migrations when new fields are introduced (payments, batch/expiry, etc.).

Local Rebuild Command

```
cd /Users/nadiya/AxEin
docker compose -f docker-compose.yml -f docker-compose.local.yml up -d --build web
```

Appendix (Key Fields)

AREA	FIELD	MEANING
Invoice	Amount Paid	Amount received at billing time.
Invoice	Pending Amount	Balance due (Total – Paid).
Invoice	Payment Status	Paid / Partial / Pending.
Healthcare	Patient / Doctor	Printed on invoice header for compliance/workflow.
Healthcare	DC No	Delivery challan number auto-generated per day.
Inventory	Lot / Expiry	Batch traceability and near-expiry monitoring.
GST	Output vs Input	Output GST from sales; Input GST from purchases (ITC).

End of handbook.
